-  Oaks Lodge, Fordham Road,  
Newmarket CB8 9DL

## About the treatment

Permanent Eyeliner is a fully customizable treatment that will enhance your eyes for many years to come. From a subtle lash line enhancement to add depth and dimension. Not only is a steady hand and a keen eye for design essential to a successful treatment, but comfort control is also equally important. As with all permanent makeup treatments, a perfection session is scheduled once the treatment area has fully healed. Often no additional retouch is required.

## The procedure

The treatment will take approximately 2 hours.

- Stage 1 - **Consultation** Covering medical history, contraindications, shape, colour and what you want to achieve. .
- Stage 2 - **Application** Eyeliner requires no pre drawing for shape. So I just begin the tattooing through the lash line.
- Stage 3 - **Top up** top up will happen atleast 28 days after the first treatment.

## Contraindications

- Pregnancy
- Diabetes
- Heart conditions
- Haemophilia
- Epilepsy
- Autoimmune disorders
- Blood borne diseases
- Thyroid conditions
- Cancer
- Breastfeeding
- Scarring in treatment area
- Cold sores

### 1 week before

- Avoid eyelash serums or anything that promotes hair growth.

### 2 weeks before

- Do not have microdermabrasion, laser, chemical peels or intense treatments on the face
- Do not have botox
- Do not use any retinol/ anti aging creams on the area.

# Aftercare

## EYELINER

Careful attention needs to be taken when caring for your semi-permanent makeup post procedure, within the next 3 days your procedure will lightly scab over then peel away, do not pick or pull at the treated area and only use aftercare provided.

It will take 24 hours for the area to create a protective barrier; your final colour result will take 28 days. A re-touch cannot in any circumstances take place until 28 days as scarring may occur. Your procedure will take 3 phases, 1) heal, 2) peel, 3) fade. We do not recommend that make up is worn post procedure or during the healing process

## Days 1-7

From waking the day after this procedure the area may appear swollen or puffy. The reason for this is lymphatic fluid flows to the area to heal where the skin has been broken; when you are up and about the puffiness will reduce as lymphatic drainage will occur.

If you experience any discomfort in the next 24 hours a cold compress may be applied to the area.

Do not apply any aftercare to the eyeliner.

## Do not

- Use a washcloth or anything abrasive on your tattoo
- Pick or scratch your tattoo
- Apply any make up on the area for at least 5 days! Be careful when applying daily skincare products and makeup around the area.
- The Red Cross has advised not to give blood for 6 months following a semi-permanent make-up procedure.

## Avoid

- Saunas, hot baths/showers facial treatments for 14 days post treatment or until all scabbing has healed.
- Avoid sun beds and sunbathing for at least 14 days.
